THE MODEL IS COORDINATED.

TECHNICAL REFERENCE / VERSION 2.0 / 17 OCTOBER 2026

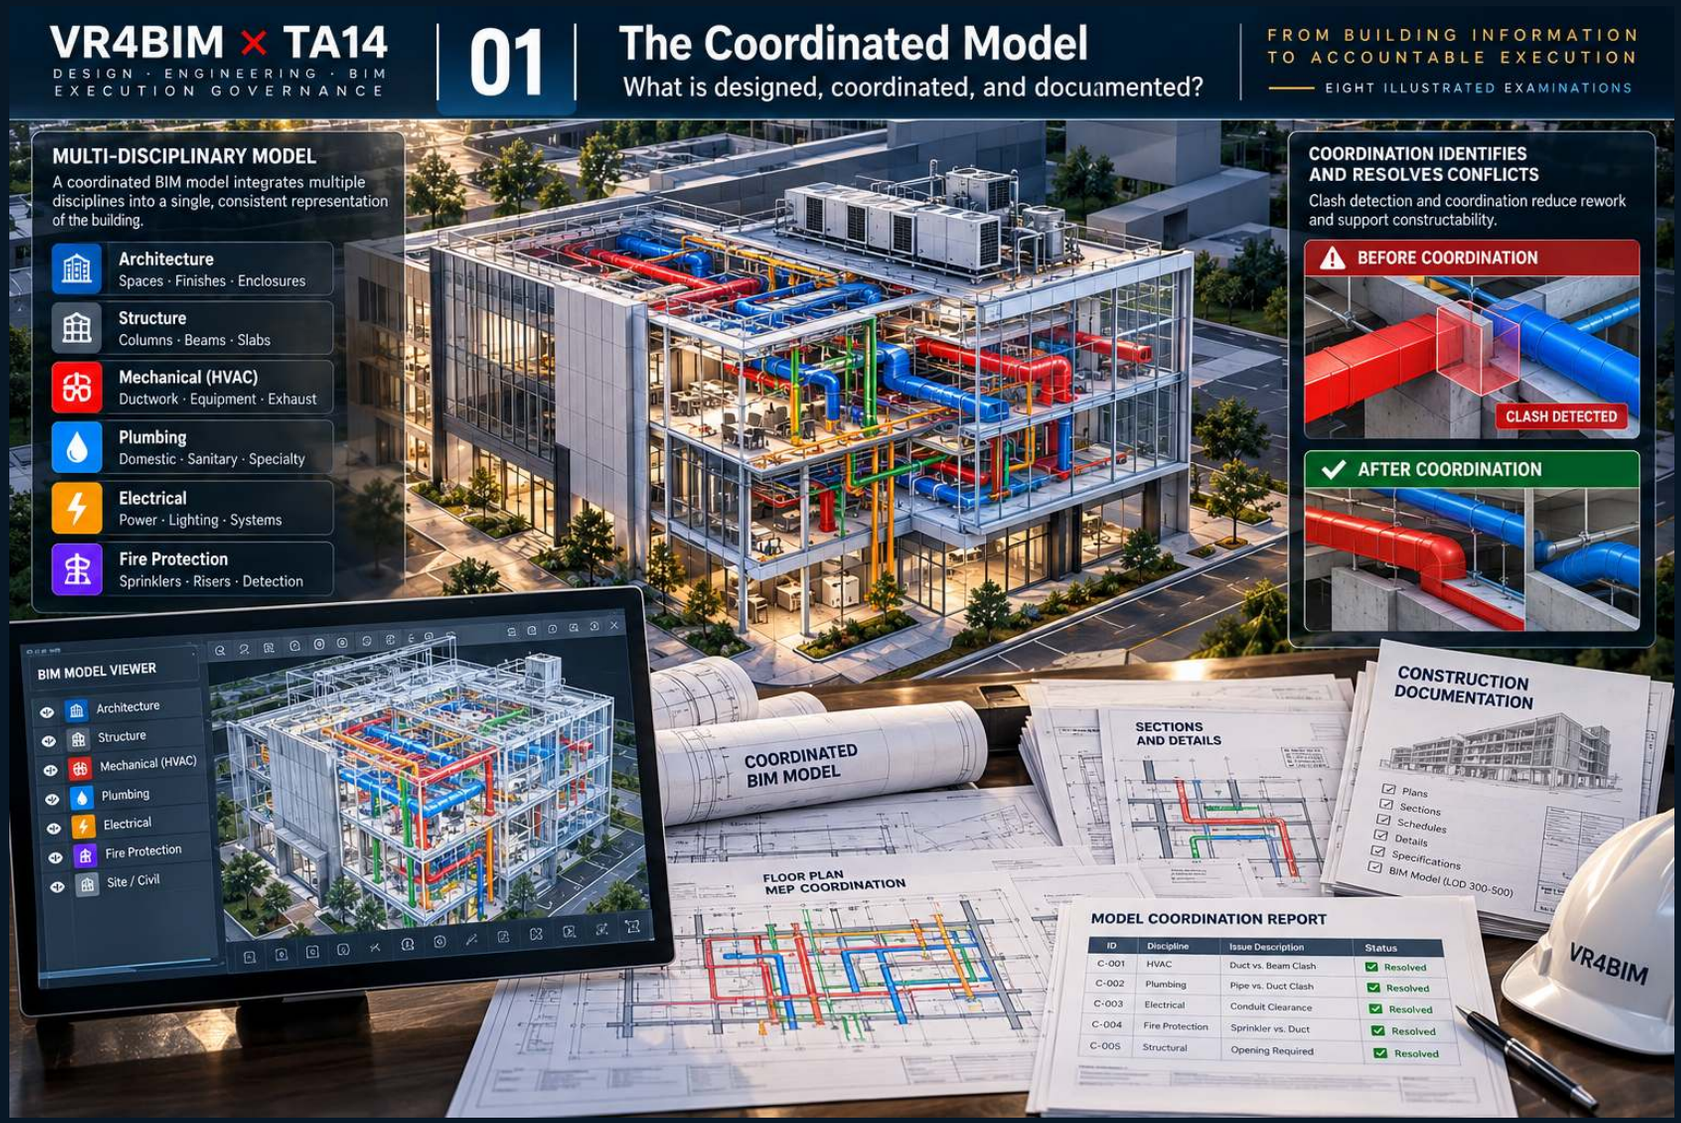

WHO AUTHORIZES REALITY?

From coordinated building information to accountable physical and financial execution.

THE GOVERNING QUESTION

Does this proposed consequence have sufficient Admissible Evidence, Applicable Authority, and Established Standing to become reality NOW?

A proposed VR4BIM x TA14 collaboration teaching demonstration covering eight distinct examination boundaries. The scenarios, names, signatures, permits, readings and financial amounts shown in the illustrations are synthetic and must not be treated as field records.

GOVERNANCE PRINCIPLE

Coordination is not construction authorization.

EXAMINE

Inspect model revision, discipline ownership, clash register, resolved issue status, and the exact asset affected.

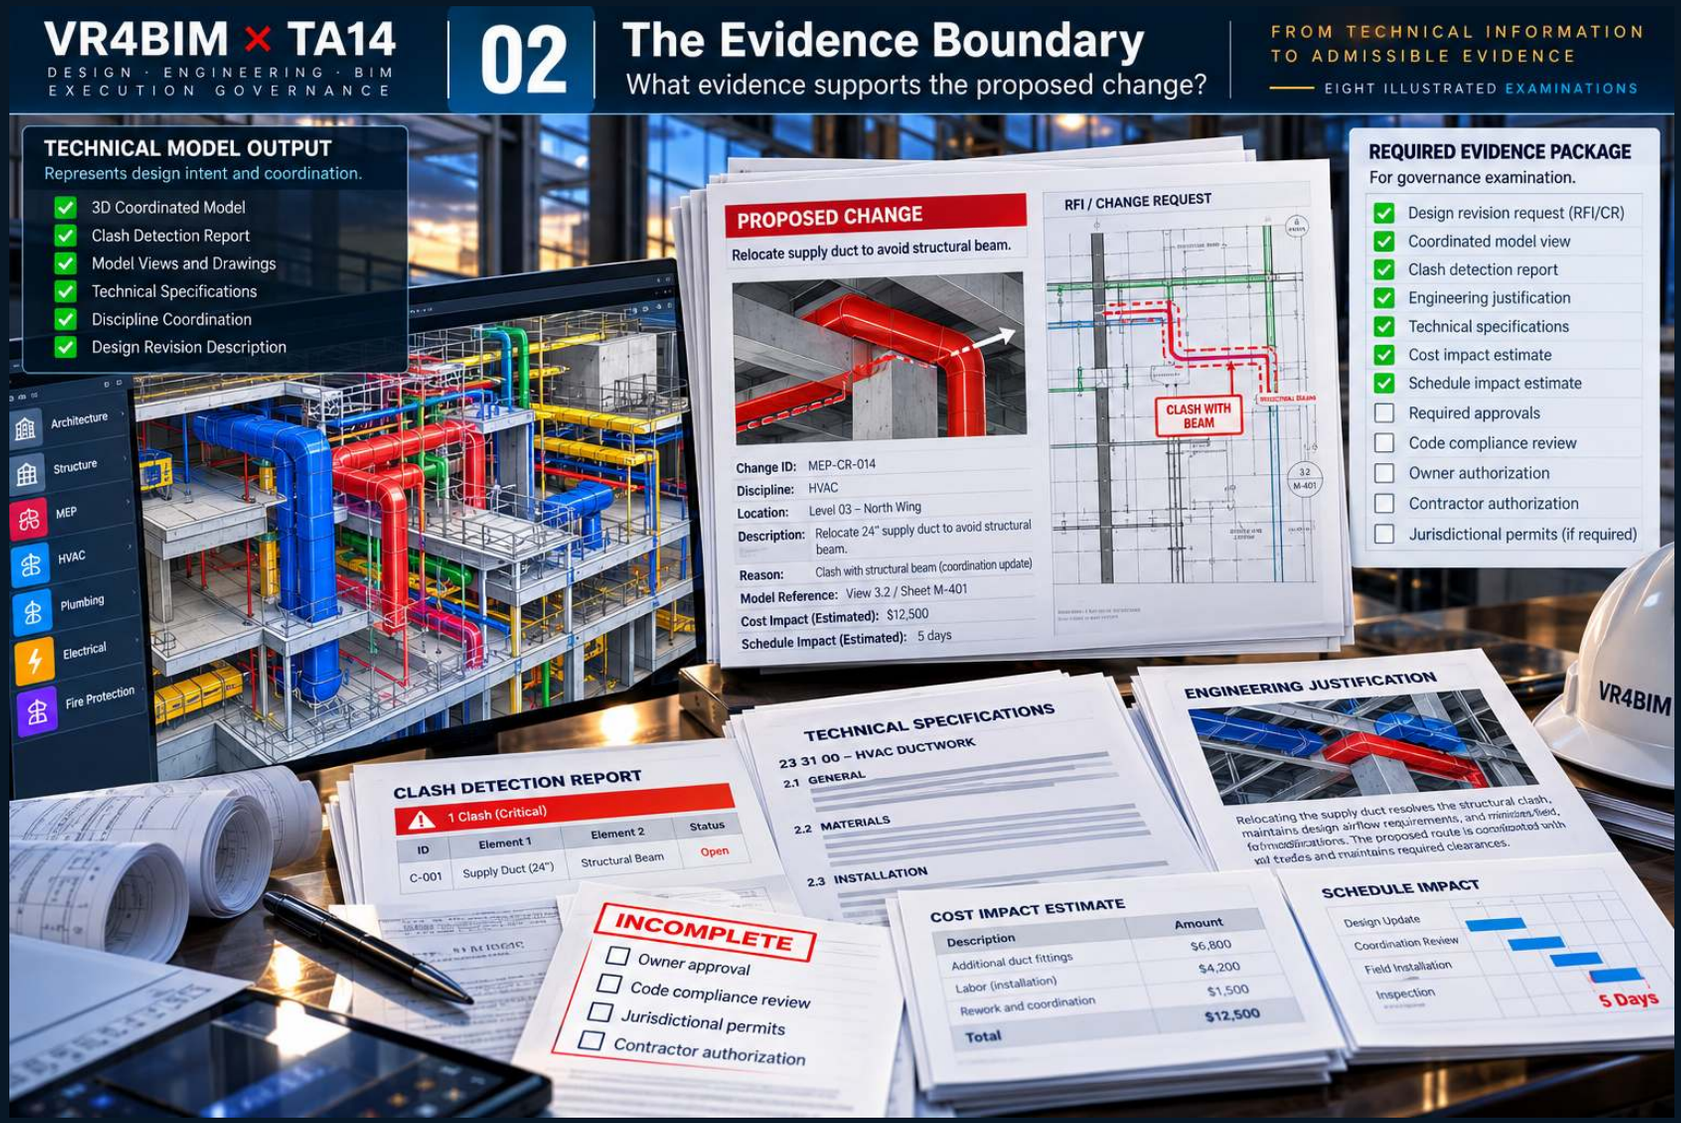

DISTINCTION

A resolved model clash establishes a represented coordination result; it does not prove field conditions, issued design status, permission to change, or completed installation.

NEXT EXAMINATION

Ask which source records, approvals, and site observations are missing.

SYNTHETIC ILLUSTRATION: All pictured names, signatures, permits, quantities and approvals are hypothetical.

GOVERNANCE PRINCIPLE

A complete-looking package is not necessarily admissible.

EXAMINE

Identify the origin, timestamp, revision, author, transformation history, uncertainty and applicability of each record.

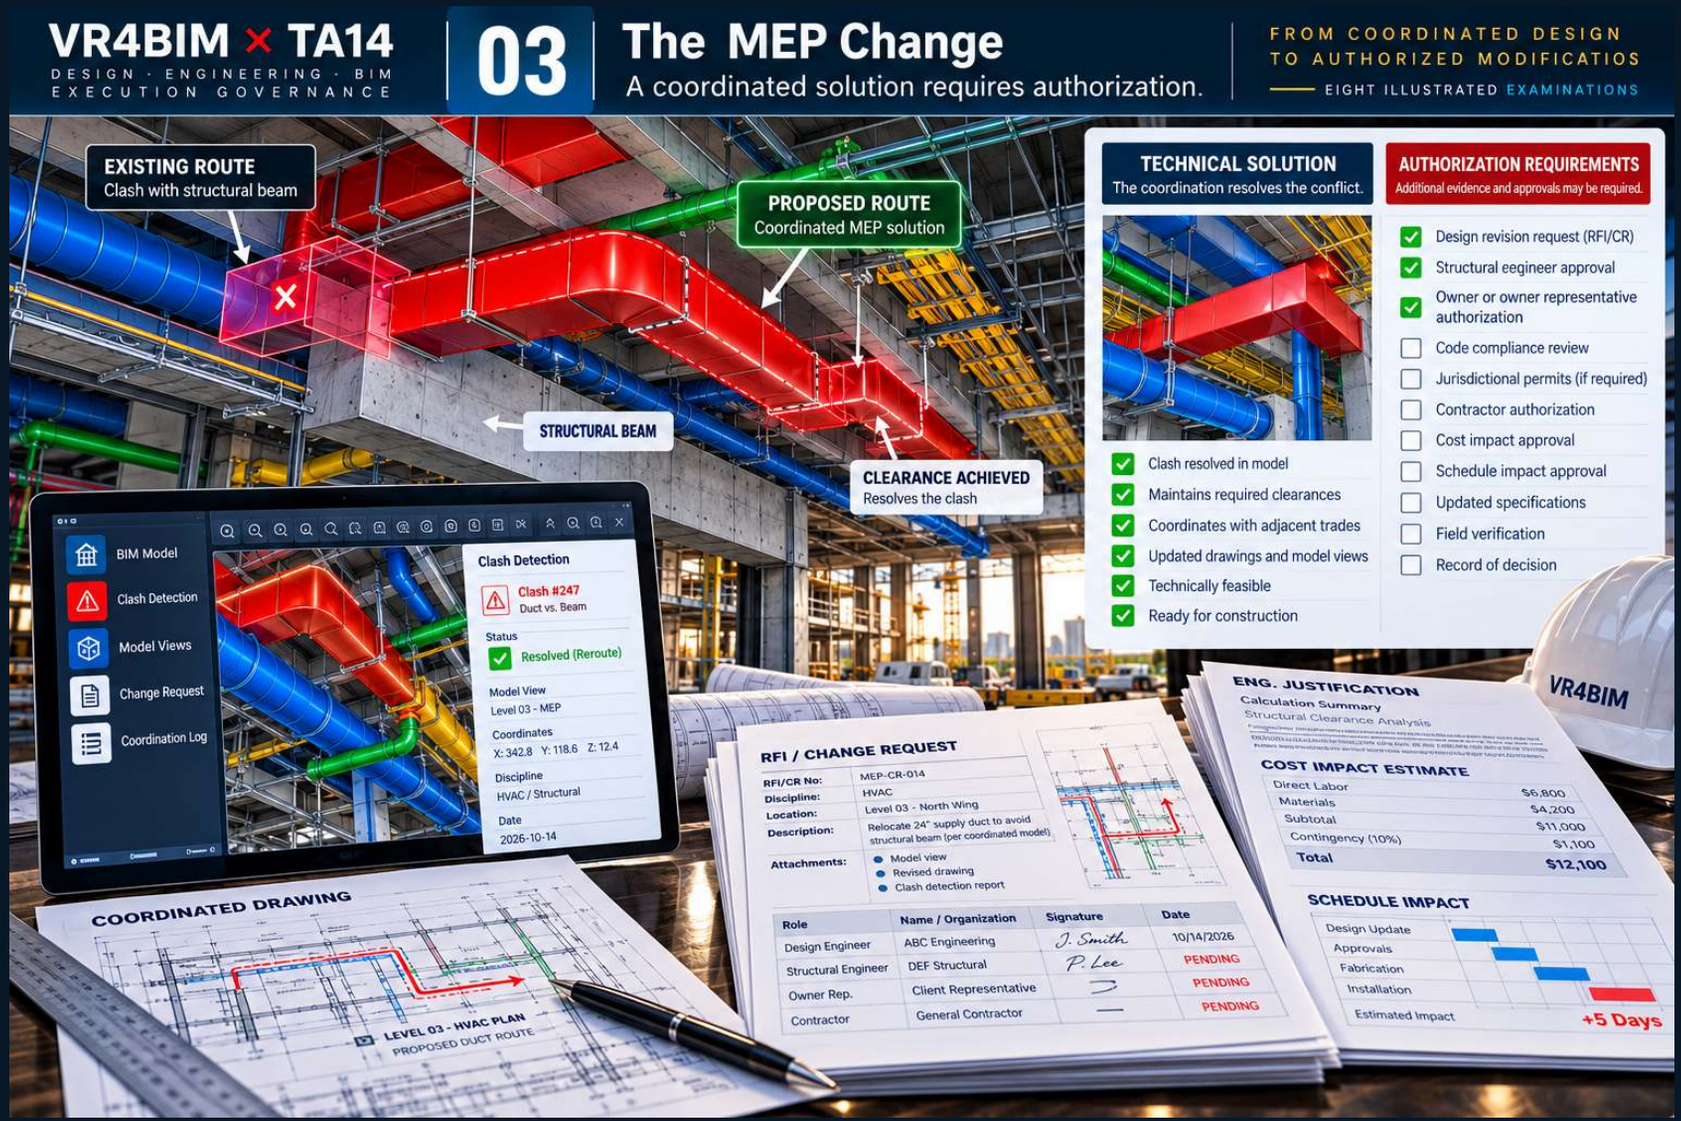

DISTINCTION

A BIM view, RFI, clash report, field photograph, inspection and signed approval have different evidentiary purposes. Preserve originals and distinguish observations from interpretations.

NEXT EXAMINATION

Establish a traceable evidence set for the exact proposed consequence.

SYNTHETIC ILLUSTRATION: All pictured names, signatures, permits, quantities and approvals are hypothetical.

GOVERNANCE PRINCIPLE

Technical feasibility does not authorize a field modification.

EXAMINE

Bind the proposed duct reroute to the current drawing, location, design requirements, safety constraints, cost and schedule implications.

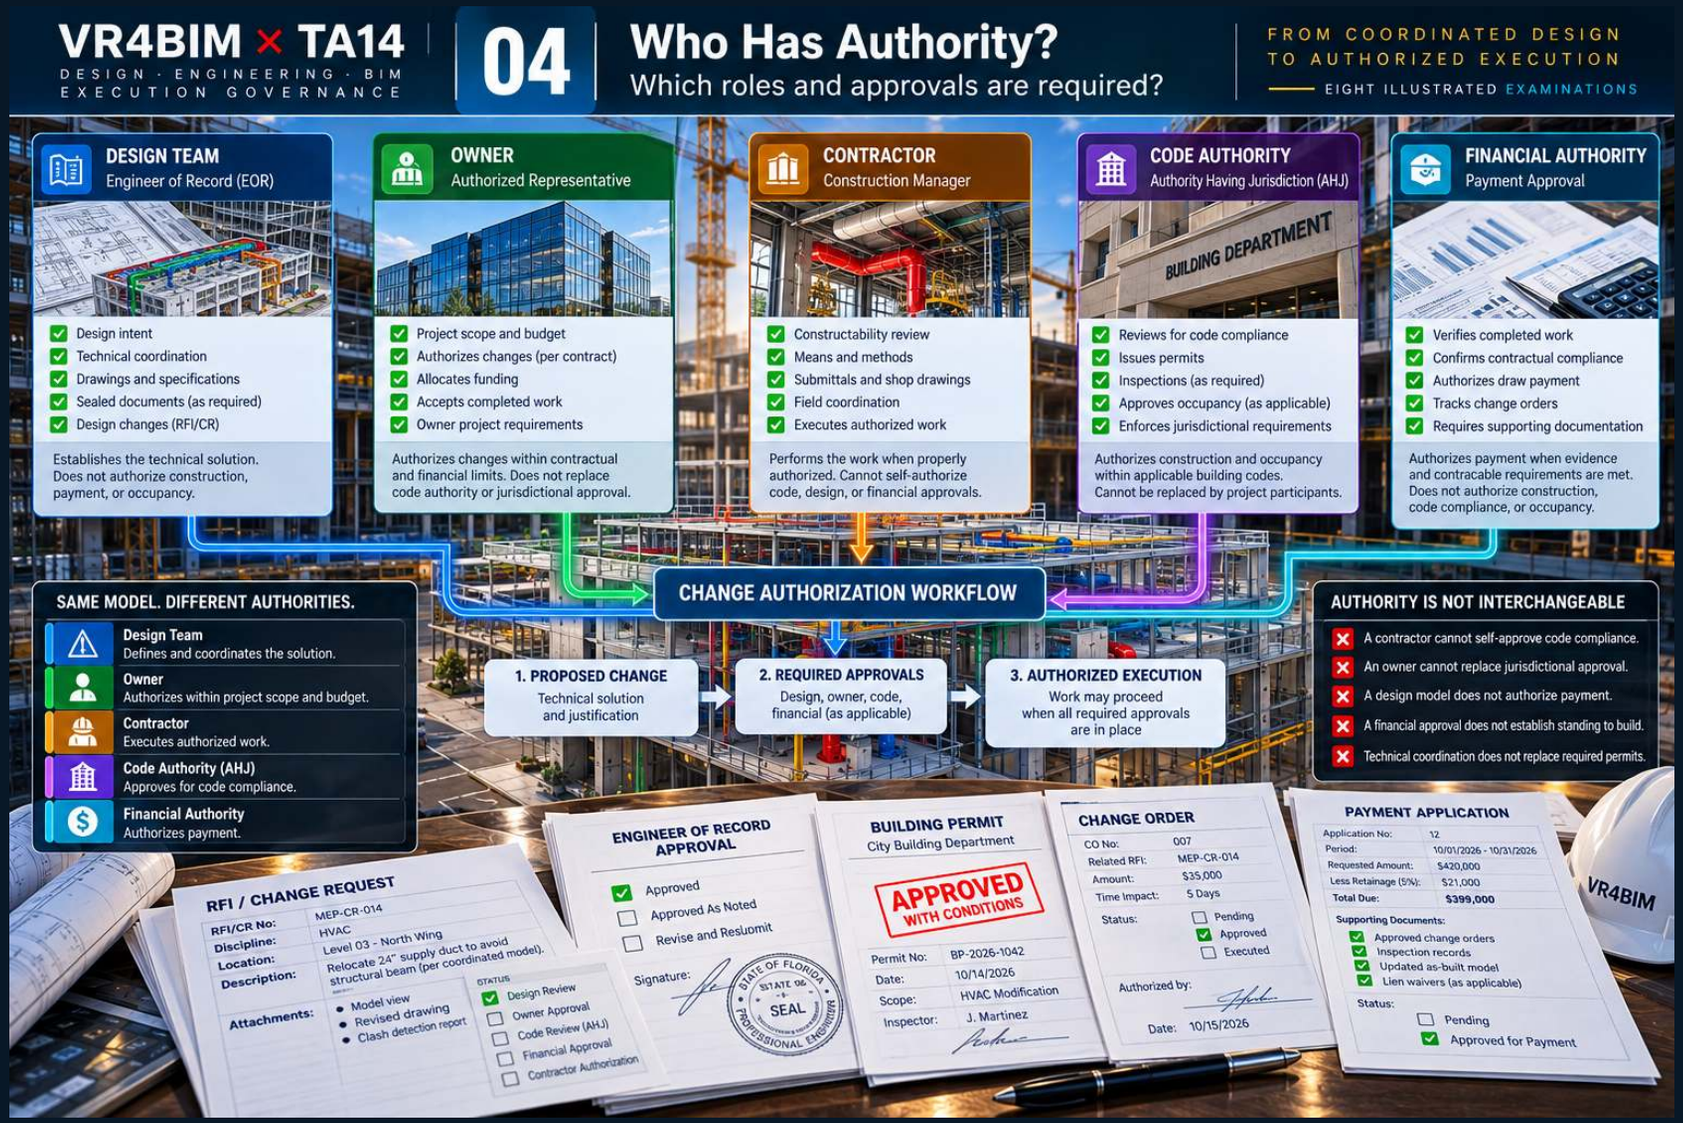

DISTINCTION

A clash-free route may affect structural clearances, fire separation, access, air performance, maintenance and contract scope. The responsible reviewers and required approvals are project-specific.

NEXT EXAMINATION

Identify the applicable authority for each affected decision.

SYNTHETIC ILLUSTRATION: All pictured names, signatures, permits, quantities and approvals are hypothetical.

GOVERNANCE PRINCIPLE

Approval rights are not interchangeable.

EXAMINE

Separate the engineer of record, owner representative, contractor, authority having jurisdiction and payment decision-maker.

DISTINCTION

Design review, contract authorization, code permits, field execution and payment approval can belong to different actors and instruments. No single approval substitutes automatically for another.

NEXT EXAMINATION

Identify the actual actor and the source of their standing.

SYNTHETIC ILLUSTRATION: All pictured names, signatures, permits, quantities and approvals are hypothetical.

GOVERNANCE PRINCIPLE

A title or credential alone is insufficient.

EXAMINE

Examine ACTOR, CAPACITY, STANDING BASIS and AUTHORITY RELATIONSHIP for the specified action, scope and time.

DISTINCTION

A person may possess technical competence or system access without delegated power to authorize the particular consequence. Applicable Authority and Established Standing are independent requirements.

NEXT EXAMINATION

Bind the decision to a specific actor, asset, action and time.

SYNTHETIC ILLUSTRATION: All pictured names, signatures, permits, quantities and approvals are hypothetical.

GOVERNANCE PRINCIPLE

Design, installation and payment are separate consequences.

EXAMINE

Review as-built evidence, quantities, inspection status, change order, contract conditions, payment milestones and signer authority.

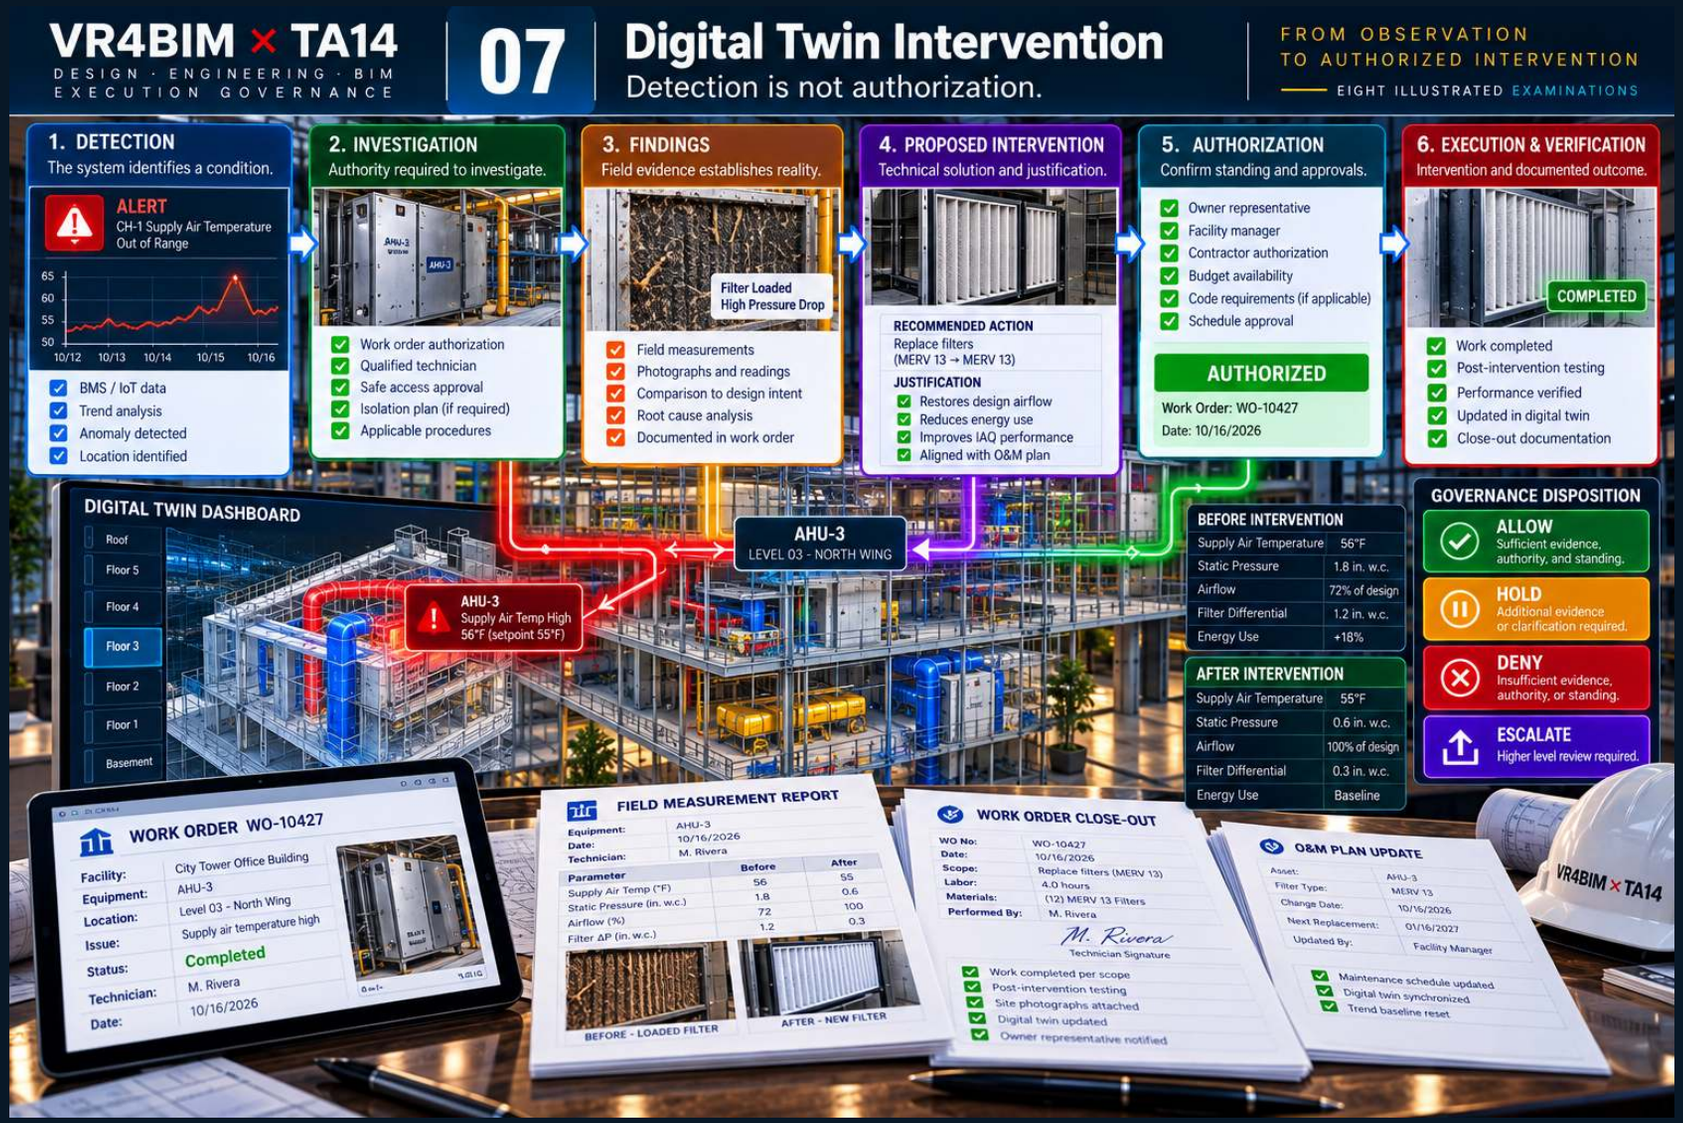

DISTINCTION

A coordinated model does not establish work completed; completed work alone does not establish contractual entitlement or authorization to disburse. Financial consequences require their own examination.

NEXT EXAMINATION

Determine whether the payment evidence and decision rights are sufficient.

SYNTHETIC ILLUSTRATION: All pictured names, signatures, permits, quantities and approvals are hypothetical.

GOVERNANCE PRINCIPLE

Detection is not permission to intervene.

EXAMINE

Separate sensor observation, diagnostic investigation, proposed repair, work authorization, safe execution and measured outcome.

DISTINCTION

An alert may support an investigation but not necessarily a physical intervention. The scope and standing to inspect may differ from those needed to modify operating equipment.

NEXT EXAMINATION

Check intervention conditions, stop criteria and post-work verification.

SYNTHETIC ILLUSTRATION: All pictured names, signatures, permits, quantities and approvals are hypothetical.

GOVERNANCE PRINCIPLE

Authorize only the bounded consequence supported NOW.

EXAMINE

Bind evidence, controlling authority, actor standing, asset, method, time window, limits, disposition and outcome record.

DISTINCTION

ALLOW, HOLD, DENY and ESCALATE are distinct decisions. Even an ALLOW does not establish that the work was executed correctly; the outcome must be independently verified.

NEXT EXAMINATION

Preserve the decision record and compare actual outcome to authorized scope.

SYNTHETIC ILLUSTRATION: All pictured names, signatures, permits, quantities and approvals are hypothetical.

EIGHT ANCHORS / ONE CONSEQUENCE BOUNDARY

THE CONTROL CHAIN

01 Reality	02 Record	03 Continuity	04 Admissibility
05 Binding	06 Commit	07 Execution	08 Outcome

Authority context may inform the decision, but execution authority must be established for the local consequence, with current evidence, the correct actor and the specified scope.

No admissible evidence. No admissible execution. | Capability is not Authority. | Observed is not inferred. Inferred is not authorized.

MEP DUCT REROUTE / GOVERNANCE TRACE

WORKED HYPOTHETICAL CASE

01 PROPOSE	Reroute a supply duct around a structural beam in a Level 03 ceiling zone.
02 RECORD	Model revision and clash report exist; field clearance and issued drawing status remain unverified.
03 AUTHORITY	Required design, owner, contractor and jurisdictional reviews depend on project instruments.
04 STANDING	No verified delegation or current approval is established for the person directing installation.
05 DISPOSITION	HOLD: do not execute the reroute until evidence and authorization gaps are resolved.
06 RELEASE CONDITION	Re-examine current field evidence, controlling documents, authorized actor, scope and stop criteria.

FOUR DISPOSITIONS / DISTINCT CONSEQUENCES

DECISION SEMANTICS

ALLOW	Sufficient current evidence, authority and standing for the precisely bounded action; execute only within conditions.
HOLD	Missing or unresolved evidence, approvals or standing; preserve state and request specific missing items.
DENY	The proposed consequence is not permitted under the controlling boundary; do not proceed with that proposal.
ESCALATE	The question requires an identified higher or different competent decision-maker; do not infer authorization.

A PRACTICAL VR4BIM x TA14 EXPLORATION

COLLABORATION PATHWAY

1 CHOOSE A WORKFLOW

Select a representative BIM/MEP change, construction approval, payment or digital-twin case; use synthetic or permissioned materials.

2 DEFINE THE CONSEQUENCE

Specify the physical or financial action, affected asset, intended actor, time and proposed effect.

3 MAP RECORDS AND DECISIONS

Identify the controlling model revision, field evidence, approvals, instruments, standing and missing records.

4 EXAMINE THE BOUNDARY

Discuss how a bounded TA14 decision could complement existing BIM coordination without claiming an integration exists.

5 EXPLORE COMMERCIAL FIT

Identify implementation responsibility, interfaces and value to customers before agreeing any formal scope.

OPEN INTRODUCTORY COLLABORATION

No payment or governance registration is required merely to explore an inbound commercial opportunity.

WHAT THIS REFERENCE DOES NOT ESTABLISH

SCOPE AND CONTACT

INDEPENDENCE

This is a TA14-prepared conceptual demonstration; it does not establish VR4BIM participation, approval, endorsement or technical integration.

ILLUSTRATIVE CONTENT

All pictured permits, names, signatures, amounts, credentials, readings and project outcomes are synthetic and must not be relied on as project evidence.

NO PROFESSIONAL DETERMINATION

This reference does not make an actual legal, engineering, code, contractual or financial authority determination; competent project-specific review is necessary.

NO FIELD AUTHORIZATION

A teaching disposition is not permission to perform construction, alter building equipment, approve payments or bypass governing procedures.
